

YASH MESHARAM

Full Stack Software Engineer — TypeScript, React, Node.js, PostgreSQL

+91-8817766818 — yashmeshram786@gmail.com — linkedin.com/in/yash-m-665952107 — github.com/fyiamyash

TECHNICAL SKILLS

Core: TypeScript, React, Next.js, Node.js, NestJS, Express.js

Data and APIs: PostgreSQL, MongoDB, Redis, Prisma ORM, REST APIs, WebSockets

Cloud and Tools: AWS EC2, Amazon S3, Git, Bash, Linux

Additional: JWT, bcrypt, Go

EXPERIENCE

Full Stack Engineer

Remote

Benekiva

Mar. 2024 – Jun. 2026

- Owned an end-to-end claims-management module in Next.js and React for two client projects, including policy overview tiles and claim-amount updates that validate allocation through client APIs and block workflow progression until allocation is complete.
- Built authenticated Node.js and TypeScript APIs for policy identifier retrieval and policy creation, including logic to associate externally supplied documents with existing policies.
- Redesign large claim-document uploads using Amazon S3 presigned URLs, moving uploads directly from clients to S3 after server-mediated uploads crashed on large files; removed the application-server bottleneck and failure mode.
- Designed a document-metadata table and added a policy-number index for policy lookup APIs, improving query performance by 20–30%.
- Released changes weekly through QA, UAT, and production using a release-branch workflow for AWS EC2-hosted applications; supported a platform handling approximately 50K–1M daily requests and 100+ active users.

Associate Software Engineer

Delhi, India

Hexaware Technologies

Jun. 2021 – Dec. 2023

- Built a React module for a healthcare platform that surfaced doctor details, operation counts, and procedure history alongside hospital patient and scheduling data.
- Enhanced Node.js and Express APIs to expose additional client-requested data fields for healthcare workflows and resolved edge cases that had caused server crashes.
- Developed and maintained full-stack web applications using React, Node.js, Express, and MongoDB, delivering bug fixes and product enhancements across frontend and backend components.

PROJECTS

Centralized Exchange | *TypeScript, React, PostgreSQL, Prisma, Redis, WebSockets*

GitHub

- Built a centralized exchange from scratch with a React interface for order management, market visualization, and real-time trading interactions, backed by TypeScript services, Prisma, and PostgreSQL.
- Wrote the order-book matching engine and delivered real-time order placement, trade execution, and market-data streaming over WebSockets.
- Secured all routes with JWT authentication and bcrypt password hashing; used Redis Streams and consumer groups to preserve order-processing events, with five-minute order-book backups to support recovery after matching-engine failure.

EDUCATION

Rungta College of Engineering and Technology

Bhilai, CG

Bachelor of Technology in Computer Science

Jun. 2018 – Jun. 2021
